

REMARKS

Applicant respectfully submits a response to the Notice of Non-Compliant Amendment under 37CFR 1.121 dated December 20, 2006.

Claims 83-124 remain. No new matter has been added.

This amendment adds changes and/or deletes claims in this application. A detailed listing of all claims that are, or were, in the application, irrespective of whether the claims(s) remain under examination in the application, is presented, with an appropriate defined status identifier.

After amending the claims as set forth above, Claims 83-124 are now pending in this application. This system incorporates a position recognition system(GPS) coupled with location based maps that allows a user to generate routing guidance and information for locations specified by the user within a specified geographic site/location and the needed information associated with that specified location or geographic site.

During the pro se interview a demonstration was made of an embodiment of the claimed invention, which was believed by the Applicant to distinguish the claimed subject matter from all cited references of record including U.S. Pat. No. 6,286,145 (Griffiths et. al). Applicant believes that new Claims 83-124 which include amendments based on previously submitted Claims 1-41, to recite subject matter not shown in Griffiths et al, including in combination with other recited limitations, for example "a GPS-supported interactive map to provide navigation capabilities relating to the site as well as a user's location with the specified site to a user " (Claim 83), a "portable computing device" (Claim 94), or "an internal storage device of the terminal device" (Claim 105), are patentable over the references cited in the Office Action dated April 10, 2006, and that the amendments overcome the rejections in the Office Action, under 35 U.S.C. § 102 and 103, as discussed with the Examiner during the interview between the Applicant and the

Examiner on December 20, 2005. The Applicant also notes that in the arguments raised by the Examiner in the Office Action dated April 10, 2006 referencing U.S. Pat. No. 6,038,610 (Belfiore et al) Applicant will contend that the invention as claimed in Claims 83-124 which include amendments based on previously submitted Claims 1-41, to recite subject matter not shown in Belfiore et al. Belfiore et al refers to sitemaps as defined by the following : A hierarchal visual model of the pages of a Web site. Site maps help users navigate through a website that has more than one page by showing the user a diagram of the entire site's contents. Similar to a book's table of contents, the site map makes it easier for a user to find information on a site (website) without having to navigate through the site's(website) many pages. Applicant's claimed invention works with "sites" as in geographic locations.

The Applicant notes that during the interview the Examiner requested amendment to the title of the Application. The Applicant would agree to an Examiner's Amendment adding the following text to the end of the present title, "For Providing Position-Related Information for Users a Location Site,"

It is the Applicant's understanding that in view of the demonstration and distinction of the claimed invention the entry of a Notice of Allowance is forthcoming,

Applicant believes that the present application is now in condition for allowance. Favorable reconsideration of the application as amended is respectfully requested. The Examiner is invited to contact the undersigned by telephone if it is felt that a telephone interview would advance the prosecution of the present application.

Respectfully submitted,

Date:

June 20, 2007
